5 COMMON SCLERAL LENS MYTHS (AND THE TRUTH BEHIND THEM)

With a growing body of evidence supporting scleral lenses for a range of uses, many rewards are coming as we learn more about their market potential in the mainstream. But despite the increase in popularity over the last ten years, there are still misconceptions about scleral lenses, especially large-diameter lenses. We’re here to set the record straight.

MYTH #1
BostonSight SCLERAL Lenses are only for the most complex ocular surface diseases.

From Dry Eye Disease to Keratoconus, BostonSight SCLERAL is helping to redefine the limits of corneal health solutions for a world of patients. Intelligently designed to address common and rare conditions, BostonSight SCLERAL lenses are revolutionizing ocular health with a unique design and approach.

Leveraging years of PROSE data, BostonSight SCLERAL lenses are helping clinicians deliver the best care to their patients.

Designed to meet a range of conditions, BostonSight SCLERAL lenses are intelligently designed to fit properly on the ocular surface in a way that maximizes ocular health.

“BostonSight SCLERAL lenses have not only saved my sight but they are very comfortable to wear. I would highly recommend them to anyone struggling with keratoconus.”
— PATIENT, UC DAVIS EYE CENTER

MYTH #2
BostonSight SCLERAL lenses are too expensive.

ALL-INCLUSIVE PRICE THROUGHOUT FITTING PROCESS
FREE TRIAL LENS; NO SURPRISE CHARGES
WEBINARS & EDUCATIONAL MATERIALS
FITASSIST™ VOUCHER PROGRAM

Unlike other scleral lens providers, BostonSight SCLERAL offers all-inclusive pricing so there are no hidden costs or fees. Other scleral lens providers have many add-ons and surprise fees, but BostonSight lenses never have an additional cost after the initial price.

“Myths are usually the mind of the fitter rather than the patient. BostonSight SCLERAL lenses are easy to apply and remove, allowing patients to apply and remove the lenses independently without causing discomfort. I highly recommend this lens to anyone struggling with keratoconus.”
— PATIENT, Horné Eye Specialist

MYTH #3
BostonSight SCLERAL lenses are more difficult to fit and customize versus smaller diameter lenses.

When fitting scleral lenses, the biggest unknowns tend to be scleral toricity and scleral shape. But not with BostonSight’s evidenced-based design! Clinicians can rely on our built-in scleral toricity parameters, making it easy and worry-free to design lenses for patients.

BostonSight SCLERAL’s larger surface area allows for the lenses to:
• Distribute the weight of the lens more uniformly
• Avoid focal areas of compression
• Protect more of the ocular surface for dry eye and exposure patients
• Maximize full limbal clearance

“Myths are usually the mind of the fitter rather than the patient. BostonSight SCLERAL lenses are easy to apply and remove, allowing patients to apply and remove the lenses independently without causing discomfort. I highly recommend this lens to anyone struggling with keratoconus.”
— PATIENT, Horné Eye Specialist

MYTH #4
BostonSight SCLERAL lenses are more difficult to fit and customize versus smaller diameter lenses.

When fitting scleral lenses, the biggest unknowns tend to be scleral toricity and scleral shape. But not with BostonSight’s evidenced-based design! Clinicians can rely on our built-in scleral toricity parameters, making it easy and worry-free to design lenses for patients.

BostonSight SCLERAL’

MYTH #5
When it comes to lens fitting, many patients don’t need a large lens for long-term health.

Data shows that though many patients can use smaller lenses for many conditions, the optimal solution is the BostonSight SCLERAL lens.

73.6% of patients experienced significant improvement in visual function at six months, which was sustained at five years with continued lens wear.

Through research and years of experience, BostonSight has created a scleral lens that helps you deliver a smart, predictable, and efficient solution, giving your patients a gradual improvement in vision, and their life.

“Myths are usually the mind of the fitter rather than the patient. BostonSight SCLERAL lenses are easy to apply and remove, allowing patients to apply and remove the lenses independently without causing discomfort. I highly recommend this lens to anyone struggling with keratoconus.”
— PATIENT, Horné Eye Specialist
