

BOSTONSIGHT
SCLERAL

THE EYE OPENER: BOSTONSIGHT'S PERCEPTION BUSTING SERIES

COMMON SCLERAL MYTHS DEBUNKED

MYTH 3:

BostonSight SCLERAL lenses are more difficult to fit and customize than smaller diameter lenses.

FACT:

Through BostonSight's evidence-based design, custom fitting lenses is easy and worry-free.

When it comes to fitting scleral lenses, the biggest unknowns tend to be scleral toricity and shape. However, that's not the case with BostonSight's evidence-based design!

The first and only evidence-based lens design, BostonSight aggregates data from over 7,000 eyes to determine common contours and shapes. Through this method, we are able to provide a smart, fast, predictable fitting process. With our FitConnect platform, BostonSight SCLERAL lenses are customized to suit every patient, ensuring predictable and accurate outcomes. That means designing lenses for patients is easier and worry-free!

BostonSight SCLERAL's full coverage of the ocular surface allows for lenses to:

- **Distribute the weight of the lens more uniformly.**
- **Avoid focal areas of compression.**
- **Protect more of the ocular surface for dry eye and exposure patients.**
- **Maximize full limbal clearance.**

So, when it comes to customizing and fitting BostonSight SCLERAL lenses, don't worry. BostonSight is the ideal solution to maximize your patients' long-term ocular health and help them see the world through a whole new lens.
